Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-27. (Canceled)

28. (New) An optical low-pass filter, comprising:

a laminated product formed by laminating a plurality of sheets of a polymer material achieving optical anisotropy so as to align directions of the optic axes thereof; and

an interface of the laminated product making a predetermined angle relative to a surface of the optical low-pass filter.

29. (New) An optical low-pass filter according to claim 28, wherein the polymer material is a drawn material obtained by drawing in one direction a polymer material achieving substantial optical anisotropy.

30. (New) An optical low-pass filter according to claim 28, wherein the polymer material is solidified with liquid crystal molecules oriented along a predetermined direction.

31. (New) An optical low-pass filter according to claim 28, wherein a conductive coating is applied onto the surface of the polymer optical low-pass filter.
